

JAVASCRIPT TASK # 02 – DATA TYPES

- 1) Write a JavaScript program to initialize 5 different variables with five different data types. Print the value of each variable and their type in browser's console.
- 2) Write a JavaScript program having a simple function to differentiate the two Different data types. Undefined and null
- 3) What is the output of this program and why? Write the proper reason below the program.

```
var y;  
console.log(y === "cool");
```

- 4) Check the datatypes of variables, print the output, of this statement and describe the reason. if I want both answers to be equal, write will be the method?

```
var a = 3 + "7";  
var b = 3 + 7;
```

- 5) Write a program that elloborate the difference b/w (==) operator and (===) operator.
